Box 4301, Baton Rouge, LA 70821-4301, to provide the public with environmental information in accordance with La.R.S.30:2011, using standards for printing by state agencies established pursuant to La.R.S.43:31.

Printed on recycled paper. 

Notice to Readers: The Louisiana Environmental Update is published 4 times each year by the State of Louisiana, Department of Environmental Quality, to provide news and information of interest to the residents of Louisiana. Upon request, individuals or groups with 25 or more members will be placed on the mailing list of the Louisiana Environmental Update. If you wish to receive copies of this publication by mail, please contact the Communications Section at (225) 219-3960 or e-mail or write to the addresses provided above.

## Message From the Secretary

Mike McDaniel, Secretary  
Louisiana Department of  
Environmental Quality

The level of activity within the Department continues to be very high as we move through spring and into the summer. In addition to our routine activities, we are well into the 2004 legislative session, rolling out some new initiatives, entering into strategic planning season and, of course, continuing to deal with responses to emergencies.

I would like to take this opportunity to commend and thank all of our employees for effectively maintaining operations through our recent transition and changes in Executive Staff. Your professionalism is appreciated.

We are currently involved in the 2004 legislative session, which is requiring the attention of a number of our staff. Karen Gautreaux and her legislation team are doing an outstanding job in tracking, analyzing and testifying to move bills we have proposed and responding to other bills that might affect DEQ. It is comforting to know how well represented we are in the legislative process.

The Department is also currently involved in a number of major new initiatives. Some of the more notable of these are:

- We are working very hard to try to avoid implementation of reformulated gasoline in the Baton Rouge ozone nonattainment area scheduled to occur by June 23. Economic consequences of RFG in the Baton Rouge area will be severe, and our analyses show no ozone reduction benefit from implementation of the federal fuels program.

- We have recently launched the summer 2004 ozone attainment initiative for the Baton Rouge area that includes increased monitoring and data analysis, an improved ozone forecasting and industry response effort and an expanded Ozone Action Day program.

- DEQ, along with DHH, the Office of State Parks and the Lake Pontchartrain Basin Foundation, recently began the first-ever, state collaborative beach monitoring system. Using a grant from EPA, DEQ and DHH will develop water-quality standards for Louisiana recreational waters. The standards are designed to let swimmers know when the water is safe for swimming. The pilot program will begin at three state parks, Fontainebleau, Grand Isle and Cypremort.

- We are consolidating all Department mercury-related activities into one integrated program to address sources, future and effects of mercury in the state's environment.

- Along with our sister agencies, DNR and DWLF, we are establishing an Interagency Coastal Permits Team to improve the efficiency and timeliness of the

permitting process for major coastal projects.

In addition to our routine program activities, we still must effectively respond to environmental emergencies. We are very proud of the way our employees responded to the odor that rolled through downtown and in the Brusly area in late April. DEQ was out conducting air monitoring throughout the area and was quick to notify the public that the odor may be foul, but it was not harmful. DEQ responded quickly to the Brusly incident and helped the Coast Guard and State Police locate a leak on a barge that caused the odor.

I heard from several people "you are busy over at DEQ these days," which is a sign that citizens realize DEQ is working hard to protect them and their environment.

In April, Governor Blanco helped us in celebrating our Environmental Leadership Awards program, where we recognized individuals, agencies and private businesses that had gone beyond simple regulatory compliance to provide environmental improvements. Also during April, our records managements and library staff did an outstanding job celebrating Records Information Management Month and showcasing our capabilities to the public.

Another effort we are very proud of was the successful Household Hazardous Materials Day. DEQ teamed up with volunteers from businesses, industry and the community to gather and recycle materials from more than 800 people who brought everything from tires to paint to mercury switches to Memorial Stadium. Participants dropped off more than 600 gallons of paint. DEQ volunteers mixed the paint and gave it to local civic, religious and charitable organizations.

The day that I was preparing this message, we received a letter from EPA notifying us that we had successfully completed the seven performance measures established for our NPDES program. This means that the threat of withdrawal of delegation for our water program may soon be lifted. The majority of the work on this effort was done over the past year and Linda Levy and her staff are to be commended for their accomplishment.

I will close my message by thanking all our employees for their hard work in serving the public and for protecting and improving the quality of the environment in our great state. Keep up the good work. 

## Governor's Visit

Governor Kathleen Babineaux Blanco attended a communications planning meeting at DEQ headquarters in downtown Baton Rouge. Communications directors and press secretaries from various state agencies meet on a regular basis to discuss communications issues. Gov. Blanco told those attending that she wants to see the agencies work together to promote the state and that she would like for the agencies to be open and honest with the media and the public.

Governor Blanco responds to comments from the communications planning group

# New Faces at DEQ

## Chuck Carr Brown, Ph.D.

is uniquely qualified to assume the position of Assistant Secretary of Environmental Services at DEQ. He has a Bachelor of Science in Chemistry from the University of Southern Mississippi, a Master of Public Administration, from Southern University A&M and a Doctorate of Philosophy in Public Policy/Environmental Policy from the Nelson Mandela School of Public Policy and Urban Affairs at Southern University A&M. Brown is President and CEO of Brown and Associates, a firm specializing in training and development, strategic planning and program evaluation.

In his new position at DEQ, Brown has many responsibilities. Some of those include regulating pollution sources, conducting permitting activities, working with public and providing technical guidance for permit applications. Brown said he also has a duty to provide educational outreach to the public, improve public participation and assist small businesses and schools.

"My top priorities as Assistant Secretary are to streamline the permit process, improve customer

Chuck Carr Brown, Ph.D.,  
Assistant Secretary, Office of  
Environmental Services

service and improve communication with the public and industry," Brown said. "We are already using a standard oil and gas permit, which has helped tremendously. Additionally, we are in the process of piloting a standard water permit. Business and industry should start to see a noticeable improvement in timeliness. The permit backlog has already been reduced by more than 75 percent. My goal is to completely eliminate the backlog by the end of 2004."

**Harold "Hal" Leggett, PhD**, newly appointed Assistant Secretary of Environmental Compliance, has a Bachelor of Science in Biology/Agriculture, a Master of Science in Biology from Southeastern University and a Doctorate from Southern Mississippi. He brings more than 20 years experience in the environmental science field to DEQ. Hal has worked as an environmental engineer and as an environmental consultant for government, business and industry. He even worked at DEQ as a compliance inspector.

"I'm excited about returning to DEQ," Leggett said. "The goals of the Office of Environmental Compliance will be to continue the strong foundation established in past administrations with a focus on continuous improvement in providing customer service to all parties. OEC will continue to use regulations and science as the foundations for our decisions."

Hal has been involved with community and educational activities since his sophomore year in college. His favorite presentation involves giving what he calls "hands on" talks and activities to school kids. He has one talk, Creatures of the Sea, where he brings preserved specimens like a shark and an octopus for the kids

Harold Leggett, Ph.D.,  
Assistant Secretary of  
Environmental Compliance

to touch and look at. "Most of these kids have never seen a sea creature like these, except in books," Leggett said. Another presentation is on fossils. He has an extensive collection of fossils like petrified wood and dinosaur teeth and the students love to see them. Unique Adaptations is another favorite topic for discussion. Why does the male seahorse carry the eggs? Why is a sand dollar shaped the way it is? What is an oyster dog? These and many other questions get answered in his presentation.

"You can help instill a love for the environment and nature in students," Hal said. "It is very enjoyable."

## Secretary McDaniel Spreads the Word

DEQ Secretary Mike McDaniel has been spreading the word about what DEQ is doing and what he hopes to accomplish during his tenure. Recently he has given presentations at Air and Waste Management Association, LSU, to the legislature, the Ascension Parish Economic Development meeting and the Baton Rouge Clean Air Coalition.

Secretary McDaniel turned over the reins of the BRCAC to Bliss Higgins, a former DEQ Assistant Secretary who now works with Environ.

McDaniel stressed DEQ's mission and goals to the group. DEQ's mission is to provide service to the people of Louisiana through comprehensive environmental protection in order to promote and protect health, safety and welfare while considering sound policies regarding employment and economic development. The vision for DEQ, which is still a work in progress, is to be a respected and trusted steward of the environment.

DEQ intends to accomplish these things with ethics and integrity, customer service and teamwork and collaboration.

Secretary McDaniel speaks to a large group at the Air and Waste Management Association about DEQ and what's ahead for the agency.

Secretary McDaniel talks to members of the Baton Rouge Clean Air Coalition.

Ascension Parish Economic Development meeting. Secretary McDaniel with Parish President Ronnie Hughes (center) and other members of the association.

Secretary McDaniel and Bliss Higgins, new Director of the BR Clean Air Coalition.

# Louisiana Environmental Leadership Awards

The governor's pressroom was crowded with industry and community leaders, for the seventh annual Governor's Environmental Leadership Awards presentation. Governor Kathleen Babineaux Blanco, assisted by DEQ Secretary, Mike McDaniel, presented the awards to eight Louisiana Environmental Leadership Program members and special recognition awards to other organizations.

"I applaud these award-winning companies for setting a high standard for protecting our state's environment," Governor Blanco said.

Secretary McDaniel expressed the importance of voluntary efforts. "The Louisiana Environmental Leadership Program Awards recognized the effort of those who have gone above and beyond simple regulatory compliance to substantially improve our environment," he said.

The following companies and organizations received recognition:

## **Pollution Prevention Project Achievement Awards**

- General Motors (Shreveport) for recovery and reuse of approximately 408 million standard cubic feet of landfill gas in the plant boilers.
- Ciba Specialty Chemicals (St. Gabriel) for further reducing the amount of dye sent to the facility's wastewater effluent stream by providing treatment of the cleanup water through a new reverse osmosis recovery unit. The recovered dye is reused resulting in a savings of more than 17,000 pounds per year of reactive dye that otherwise would have been released to the environment.
- East Baton Rouge City/Parish DPW – Environmental Division (Baton Rouge) for the North Landfill project to provide a daily cover to the work face with slurry fiber mulch. A savings of up to 25 percent landfill space will be achieved through using hydromulch.
- Motiva Enterprises LLC – Convent Refinery (Convent) for biosludge land farm redesign project to prevent overflow of unsettled solids that, in turn, generated F037 hazardous waste; this project resulted in the beneficial reuse of 29,000 cubic yards of biosludge.

## **Pollution Prevention Program Achievement Awards**

- Lamp Recyclers of Louisiana, Inc. (Hammond) for comprehensive reuse, recovery and recycling program managing mercury and PCBs, and other post-consumer materials. Lamp Recyclers has

Secretary Mike McDaniel addresses members of the Louisiana Environmental Leadership Program at the awards ceremony.

Governor Kathleen Babineaux Blanco and Secretary Mike McDaniel with winners of the Governor's Environmental Leadership Awards and special recognitions.

increased the percent recycled from 90 percent in 2002 to 94 percent in 2003 while almost doubling the tonnage of materials handled.

- Lockheed Martin Space Systems Company – Michoud Operations (New Orleans) for energy conservation projects and activities at Michoud Assembly Facility that have resulted in a 40 percent reduction in direct and indirect green house gas emissions per each external tank manufactured and an avoidance of 124 million pounds of greenhouse emissions in 2003 when compared to the baseline period.

## **Environmental Management Systems Recognition Awards**

- Lamp Recyclers of Louisiana, Inc. (Hammond) for implementation of an Environmental Management System, incorporated into their day-to-day operations of a mercury waste recycling facility, thus reducing discharges of 981,000 pounds of toxic metals to rivers and lands. Lamp Recyclers is registered to ISO 14001 and has implemented a "no-landfill" policy.
  - Marathon Ashland Petroleum (Garyville) for implementation of an Environmental Management System that commits the facility for continual improvement to achieve exemplary environmental performance. Marathon Ashland's 268,000 barrels per day Garyville refinery is the first refinery in the United States accepted for membership into EPA's National Environmental Performance Track Program.
- ## **Community Environmental Outreach Achievement Awards**
- Marathon Ashland Petroleum (Garyville) for VOC and Particulate Matter ambient air monitoring network with three sites to ensure that the air quality of the community is protected.
  - Motiva Enterprises LLC – Norco Refinery (Norco) for implementing an air monitoring program to improve the quality of life in Norco and to create an environment where both the community and company prosper for years to come.

- East Baton Rouge City/Parish DPW – Environmental Division for community education program to reduce fats, oils and grease discharge to the sanitary sewer, and in turn, reduce the number of dry weather overflow events. Additionally, EBR City /Parish implemented an ozone outreach program which provided information to the public.

## **Outstanding Nutrient Reduction Achievement Award**

- ExxonMobil Refining & Supply Company – Baton Rouge Refinery for reduction of nitrate releases in the refinery effluent stream from 2.51 million pounds per year in 2001 to 1.47 million pounds per year in 2003.

## **Waste Minimization Achievement Awards**

- W.A. Callegari Environmental Research and Training Center (Baton Rouge) for being a world leader in a compost training and research facility providing technology in organic byproduct recycling and beneficial reuse to agriculture, municipalities and other organic waste generators.
- Green Project Store (New Orleans) for neighborhood revitalization through creative recycling and reuse of post-consumer solid wastes. Through salvage and renovation projects, the Green Project Store recovered and reused 7,500 gallons of paint and more than 300,000 pounds of building materials in year 2003.

## **Ozone Reduction Achievement Award**

- Downtown Baton Rouge Trolley Project for purchase and installation of five compressed natural gas fueled trolley buses that are providing public transportation in the Baton Rouge downtown area. This demonstration project serves to encourage ozone reduction initiatives planned in the five-parish nonattainment area.

For more information on the Louisiana Environmental Leadership Program go to [www.deq.state.la.us/assistance/elp/index.htm](http://www.deq.state.la.us/assistance/elp/index.htm).

# New Measures to Improve Air Quality

Air quality affects every aspect of Louisiana life – health, economy and quality. While the air quality is better than it was 25 years ago when 20 parishes did not meet the air quality standard for ozone, there is still much to do. On June 23, 2003, EPA reclassified East Baton Rouge, West Baton Rouge, Livingston, Ascension and Iberville Parishes as “severe” for the one-hour standard for ozone. The reclassification brought with it consequences spelled out in the Clean Air Act, including the use of reformulated gasoline.

Last year presented an excellent opportunity for these parishes to meet the standard but non-predictable ozone spikes, which contained highly reactive hydrocarbons, caused the area to remain in nonattainment. Despite the progress, there is still much to do to meet this air quality standard thereby protecting Louisiana citizens. In a continuing effort to provide Louisiana with the best possible air quality, DEQ is taking serious steps to reach ozone attainment in the five-parish nonattainment area.

The first step was to form the Highly Reactive Volatile Organic Compounds (HRVOC) workgroup to study the causes of the ozone spikes. This group is comprised of industry leaders, environmentalists, DEQ personnel and interested parties. It split into three subgroups to study the problem. The subgroups studied exceedance/data analysis, emission/meteorology monitoring and emission inventory. The groups proposed strategies for addressing ozone exceedances. These recommendations included upgrading monitors before the 2004 ozone season, recording five minute data in addition to one hour, developing a data base for past and future data and performing statistical analysis on the data. DEQ has formulated a plan of action to attack the problem based on the recommendations of the HRVOC workgroup.

## 1. Increase monitoring efforts.

More frequent monitoring with wider parameters will allow DEQ to gather more detailed information on Baton Rouge-area emissions. The LSU, Carville and Capitol sites will be able to take samples continuously on a 24-hour basis. More than 300,000 measurements will be taken per year. The existing 10 monitoring stations in the five-parish area will have enhanced sampling capability and more monitors. DEQ will be able to take 160-170 air samples per week and additional lab equipment will allow the state to better analyze the data. With a more complete picture, DEQ can better define the problem and address it. New air-monitoring equipment will be up and running by mid-summer, the height of ozone season. For air quality information go to [www.ldeq.org](http://www.ldeq.org).

## 2. Update database.

Intensive review of historical, recent, and meteorological data and a revamped database will provide another important piece of the puzzle. DEQ will expand, enhance and consolidate its air-monitoring database. It will be a live database that will help DEQ effectively profile ozone precursors using new and historical data. The improved database will help DEQ in modeling, identifying problem areas, developing ozone reduction strategies and responding to ozone events and public inquiries. In the future, current information will be available to the public on the DEQ website, [www.ldeq.org](http://www.ldeq.org).

## 3. Work closely with industry.

DEQ has developed an industry action plan with an emphasis on fugitive emissions, point sources, cooling and wastewater and flares. The focus will be on pollutants that contribute to ozone. Highly reactive hydrocarbons, such as ethylene, toluene and propylene, will be closely studied. Fugitive, accidental and non-routine emissions will be more closely scrutinized. Mike McDaniel, DEQ Secretary, will meet with plant managers to discuss implementation of voluntary measures to discover and control emission sources. Facilities will be asked to develop action plans to reduce emissions, especially highly reactive, nitrogen oxides and volatile organic compounds.

DEQ's surveillance team will have a renewed emphasis on and a different approach to inspections. The inspections will be longer and more detailed. They will concentrate on specific sources identified as having emission concerns.

## 4. Educate the public.

DEQ will continue and intensify its air quality campaign to educate the public about what they can do to help reduce ozone. Activities such as a gas can exchange, press conference, speaking engagements, presentations to community groups, written information and other initiatives will help raise public awareness. Partnering with other agencies, non-profit groups and local businesses will be a priority. The message will be that air quality in Louisiana is everyone's responsibility and everyone can be part of the solution.

Reaching the ozone standard and attainment is a priority at DEQ. Experts from industry, environmental groups, and DEQ staff have worked together to approach the problem with a comprehensive plan. These groups and the citizens of Louisiana will need to work together to promote ozone reduction and produce a healthier environment, better economy and good quality of life for all.

## Frequently Asked Questions about reformulated gas

### Q. What is reformulated gasoline (RFG)?

A. Reformulated gasoline is a gasoline that contains an oxygen additive that is supposed to reduce ozone-forming pollutants. Currently, the most common oxygenates are ethanol and MTBE. In the Baton Rouge area, it is expected that ethanol will be the most common.

### Q. Where will RFG be sold and why?

A. The federal government is requiring the sale of RFG at all gas stations in the 5-parish Baton Rouge area (Ascension, East Baton Rouge, Iberville, Livingston, West Baton Rouge) because the area has been reclassified to “severe” ozone nonattainment.

### Q. When will the changeover from conventional gasoline to RFG go into effect?

A. June 23, 2004. Gas stations are expected to begin phasing in the supply before then.

### Q. Will the cost of gasoline at the pump increase because of RFG?

A. The impact on gasoline pricing is uncertain. Varying sources have estimated an increase of anywhere between three and 15 cents per gallon.

### Q. Will there be a problem if I mix conventional gasoline and RFG?

A. Based on available information, mixing RFG with conventional gasoline in a vehicle's gas tank will not present any problems.

### Q. Will RFG affect the performance of my vehicle or damage the engine?

A. According to the EPA, RFG will have no adverse effects on vehicle performance or the durability of engine and fuel system components. The use of RFG/ethanol in the Baton Rouge area is not expected to adversely impact vehicle performance. However, ethanol and water don't mix well. If your tank has water in it or the gas station's storage tank contains water, the fuel may influence the way your car drives.

### Q. Will RFG affect my vehicle gas mileage?

A. According to EPA, gasoline containing an oxygenate such as

ethanol reduces gas mileage by 1 to 3 percent. Gas mileage can also be affected by the type of engine and vehicle, driving habits, weather conditions and vehicle maintenance.

### Q. Will RFG affect my vehicle warranties?

A. Using RFG will not affect the manufacturer's general warranty or the emissions warranty. If there's ever a question concerning your warranty, see your owner's manual or consult your local dealer.

### Q. Will RFG affect my marine engine?

A. Marine engine manufacturers have indicated that the use of RFG in marine engines is acceptable, although some offer special instructions if you use RFG. You should always check your owner's manual for any specific instructions or contact your local dealer. Once again, be aware that ethanol and water don't mix well.

### Q. Will RFG affect my other types of engines such as lawn and garden equipment?

A. According to EPA, various manufacturers of nonroad engines have indicated that using oxygenated fuels is acceptable, although some manufacturers offer special instructions when using reformulated gas. Consumers should follow the manufacturer's recommendations found in their owner's manuals or consult with a servicing dealer. Similar to automobiles, there are not expected to be any problems with the use of ethanol-based gasoline in other types of engines. However, prior to using ethanol-based gasoline in these types of motors, you should review the owner's manual.

For further information: The EPA does not have a hotline for reformulated gas questions. However, you can find information on RFG at <http://www.epa.gov/region02/faq/#REFORMULATE>. You can find information on how to contact a particular office at: <http://www.epa.gov/epahome/comments.htm>

The Louisiana Department of Environmental Quality is not implementing or enforcing this federal mandate.

# Getting Personal

**Karen Jones** has a unique talent in addition to her job description as a DEQ Environmental Scientist III in the Office of Environmental Services. Karen loves making jewelry. A hobby that began about 10 years ago has now brought her recognition.

Karen recently entered the East Baton Rouge Parish Recycling and the Art Council of Greater Baton Rouge's Recycled Jewelry Contest. Karen created a pair of unique recycled earrings that were selected to travel with the winners of the contest. The earrings were recently on display at Earth Day and the Bluebonnet Library through April.

"I have always primarily made earrings, since I can use light as a component when making them more so than when I make other types of jewelry. I have always been fascinated by the role of light in adornment and ornamentation, and I am sure that my short hair contributes to my love of earrings," said Karen.

Most of her creations are from what she calls her favorite, 'found objects.' She has collected lots over the years and they contain several unusual components. Many are materials that we use in our everyday lives, ranging from shampoo bottles, fruit and vegetable containers and to various metal fragments, can be recycled into jewelry. Karen said, "My inspirations come from various sources, I am most intrigued by color, line, and texture. They are fundamental in making recycled materials suitable for jewelry use."

Karen sells her jewelry locally at shows, shops and to individuals. Her pieces are currently for sale at Nature's Treasures and the Arts Council. They were previously sold in a Main Street Market shop and downtown Baton Rouge newsstand.

Karen joined DEQ in the summer of 2001. She has worked in the Compliance Assistance Requirements Library (CARL) since July 2003. She previously worked with DEQ's Public Participation Group. Before joining DEQ she worked as a research associate for LSU for 17 years in a number of departments and disciplines. Karen received both her Master's degree in Botany and a Bachelor's degree in Liberal Studies from Louisiana State University.

Karen Jones

"I have a passion for my work. I live and breathe this stuff" **John James Clark**, Environmental Scientist III, does live and breathe the environment. John has been an employee of DEQ in various aspects of water for seven years. He presently works in the non-point source pollution section, but much of his time away from work is spent helping communities and others make sound environmental choices.

For example, John advises the mayor of his town, Grosse Tete and the Iberville Parish President, J. Milton Ourso, council members in Livingston Parish, and anyone else who will listen regarding water quality issues.

John was exposed to Louisiana's outdoors as a child, went to college to learn the science and signed on at DEQ "to help." It is John's intent to "inspire people to do the right thing" by presenting them with the best options and using best management practices to solve problems.

Just some of the projects that John spends time on include: use of natural wastewater treatment, using plants to filter the water, awareness of native plants and their importance in the local environment, helping people protect their environment and retain their sense of place, demonstrating natural river behavior to school kids and adults, and teaching people in his community about stream bank maintenance so they can improve water quality and the aesthetics of Bayou Grosse Tete.

John is an avid photographer of wildlife, native wildflowers and natural settings but mostly he enjoys talking to people and giving them environmental information.

"When I talk to people, I know my audience," John said. "I tell them how protecting their environment benefits them personally. For example, Bayou Grosse Tete is so much a part of the community and who they are, that it is part of their sense of place." Taking proper care of it means they are taking care of themselves, which just makes good sense.

John stresses that you have to take the first step to make a difference. "Making a difference helps to restore pride in who you are as a person and where you come from. This creates more productive and enthusiastic people, which guarantees greater public participation within a community. Then, suddenly the ball begins to roll in a favorable direction. There is a lot of little things people can do that can make a big difference. It's a never ending, but very fulfilling job," John said.

John James Clark

**Bijan Sharafkhani** is known by many DEQ employees as a connoisseur of food and for his knack to locate a buffet anywhere in the state. But one attribute that may surprise some is that Bijan is the current chairman of the Louisiana Professional Engineers and Land Surveying Board. Bijan received this designation after being appointed by former Governor Mike Foster.

Bijan is currently serving his fifth year of a six-year term. The board is comprised of 11 members representing various sectors who regulate individuals or corporations in the engineering and land surveying professions in Louisiana. At the national level, Bijan is chairing the Examination Administration Task force for the National Council of Examiners for Engineering and Surveying.

As the Group Four Engineering Manager in the Technology Division under the Office of Environmental Assessment, Bijan finds his work rewarding. "I work with a group of dedicated and enthusiastic people who really enjoy what they do," said Bijan. This group provides technical support to the Permits and Remediation Divisions.

He obtained his bachelor's and master's in Civil Engineering from the University of New Orleans and has been with DEQ for more than 14 years. In his spare time he enjoys ballroom dancing and working out.

Bijan Sharafkhani

**Encore! Encore!** That's music to the ears of **Marilyn Connelly**, DEQ Environmental Project Specialist 1. Marilyn is part of the team that managed the \$20 million a year Underground Storage Tank Trust Fund. This fund pays for cleanup of approximately 500 sites around the state where UST leaks have contaminated soil and groundwater. She has worked for DEQ for more than a year. Marilyn has a flair for the dramatic. She is pursuing her dream to act and has appeared with the Baker and the Baton Rouge Little Theatres.

In Baker, Marilyn appeared as Peggy in Belle a story of six sisters. This appearance helped her get "back into theatre."

At Christmas, she and Donald Trahan, DEQ Legal, appeared in Greetings at the Baton Rouge Little Theatre. This play, which mixed crabby humor with holiday sentiment, also starred Marilyn's son Christopher.

Recently, Marilyn hit the stage again as Lady Grace Manley-Prowe in the musical murder mystery, Something's Afoot. She joined a talented group to entertain the community.

Support and interest of her DEQ coworkers, made it easier for Marilyn to achieve her best. "I used to sing them my songs in the lunch room," she said. "I want to thank my coworkers."

Marilyn has three sons in their 20s, Christopher, Patrick and Sean.

Marilyn Memory Connelly

# A Day in the Life of... *An Executive Services Assistant*

Marian Mergist's strides are usually brisk as she walks to the front doors of the Galvez Building each weekday morning. That's because as Executive Services Assistant to Secretary Mike McDaniel, Mergist has plenty to keep her busy.

It's not just keeping up with McDaniel's whirlwind schedule that keeps her on the move. Marian's talent for managing, her patience and her ability to make people feel at ease are great assets to her job and DEQ. She handles phone calls, manages the Secretary's calendar and meetings and generally helps carry the load.

In addition to smoothing the way for Secretary McDaniel, Marian works closely with the other Executive Assistants and supervises several employees. Because she has been at DEQ for 15 years, Marian is a good source of information and procedures. She started at DEQ as a word processor in the water permits division. She also worked in water engineering, as a legal secretary for the Office of Legal Affairs, and Executive Secretary for the Office of Water Resources. Since 1996 Marian has occupied the office of Executive Services Assistant to the Secretary of DEQ. She was former Secretary Dale Givens' assistant for six years

and served in the same capacity for Secretary Hall Bohlinger. Marian was chosen Employee of the Year for the Office of the Secretary in 1998.

Dr. Bohlinger benefited from Marian's experience while he was Secretary from September 2002 until January 2004.

"It is valuable to have someone as your personal assistant who knows their way around, inside and outside the department" Bohlinger said. "Her experience and professionalism was a big asset to me and to DEQ."

It hasn't been all typing, scheduling and coordinating, Marian has seen some adventures in the last eight years and she has seen many changes. Through it all, there are a couple of things that make the job worthwhile.

"The people – I really like the people," she said. "And, I feel like I can make a difference."

"I'm excited about the future of DEQ," Marian said. "I've stayed at DEQ because if you work hard, there is a possibility that you can make a difference. I'm eager to see DEQ become more open to our clients and the public. We are making it easier for the public to access the agency. I've enjoyed watching the agency grow and improve. It's kind of neat to watch."

Being of service to the community is another way that Marian spends her time. She has volunteered for the DEQ United Way campaign, worked for the Arts Council and Race for the Cure.

Her commitment to service doesn't stop when she leaves her job.

Marian has volunteered at the Stop Rape Crisis Center and recently completed training to be a Court Appointed Special Advocate (CASA) volunteer.

"When you become a CASA volunteer, you commit for at least a year," Marian said. "As a volunteer you meet with all parties concerned – foster parents, social workers and school teachers – anyone who touches that child's existence. You are in a unique position to make recommendations. It's so sad – these kids are just floating in the system. You may not be able to fix the whole thing, but you can do something to make that child's life a little better."

Marian Mergist

## "Charting Our Environmental Future" – LEHA

Louisiana Environmental Health Association (LEHA) recently hosted its 57th annual education conference in Laplace. The theme of the three-day conference was "Charting Our Environmental Future." The purpose of the conference is to discuss the latest environmental concerns and issues facing the state.

LEHA was conceived in 1947 by six charter members to address environmental concerns in the state. LEHA is also a state affiliate of the National Health Association (NEHA). Its mem-

The high attendance at the conference represents individuals from local and state governments, academic institutions, industry, military services, and consulting agencies in all areas of environmental management.

bership is comprised of several individuals who study and/or work in the areas of environmental protection and public health. At present the association consists of personnel from local and state governments, academic institutions, industry, military services and consulting agencies in all areas of environmental management. These

individuals are dedicated to helping environmental health professionals meet demands for effective control of environmental issues. DEQ employee Marian Aguiard is the former 56th president of LEHA. Several other past presidents and board of director members have also been employees of the agency.

This year's keynote speaker was Senator Heulette "Clo" Fontenot, state Senate District 13. Fontenot was recently appointed as Chairman of the Senate Environmental Committee. Fontenot addressed the attendees by saying, "participation is a key component to charting our environmental future." Fontenot believes that the conference has been so successful because of the membership and attendees. "The technical expertise that comes to the table, and the opportunity to network in an open forum atmosphere is conducive to addressing the prevalent environmental matters at hand, and the make up of the audience helps achieves results." Fontenot also believes the role state agencies like DEQ and DHH play in attending and identifying concerns are important as the legislature looks to proposing future legislation.

LEHA also awards two educational scholarships each year in order to encourage outstanding students in the environmental health fields. The \$1,000 scholarships are awarded to one undergraduate and one graduate student. Any LEHA member in good standing or any official of an accredited university or college offering a

degree program in Environmental Science, Environmental Engineering or Public Health may nominate students.

Henry Graham, Environmental Affairs Director for the Louisiana Chemical Association talks with keynote speaker Senator Heulette "Clo" Fontenot, state Senate District 13.

Keynote speaker, Senator Heulette "Clo" Fontenot, state senate district 13, gave his reflections on environmental concerns from real life experiences growing up in Livingston Parish.

# EPA Tells of DEQ Successes at 26th Annual Conference on the Environment

Louisiana is excelling in many areas of environmental concern, according to Carl L. Edlund, EPA Region 6 Multi-Media Planning Director.

Edlund told a group of industry leaders, DEQ employees and interested citizens about the areas where the state is leading the country during his remarks at DEQ's 26th annual Conference on the Environment, held March 18-19 in Lafayette. The EPA also recently sent DEQ a letter to formally recognize the agency for its leadership.

"With this achievement, LDEQ becomes the national leader in RCRA (Resource Conservation and Recovery Act) program authorization. I congratulate and commend the LDEQ staff for this outstanding accomplishment," Edlund wrote in the letter.

Louisiana has "made a tremendous improvement in air quality for the EPA one-hour standard and is reaching the eight-hour standard faster than most areas of the country," Edlund said. The eight-hour standard follows the EPA's more stringent guidelines on air quality.

The conference was well attended by exhibitors and the public. The attendees could choose from 34 different presentations on a variety of environmental subjects. Seminars and panel discussions included varied subjects such as Homeland Security, Green Chemistry, Review of Criteria Air Pollutants and Emergency Release and Incident Reporting. The seminars offered professional development hours to the attendees.

The 126 exhibitors demonstrated the newest in technology and ideas to the crowd of more than 1,000 people.

The conference provided an excellent opportunity for regulators, environmental managers, consultants, industry representatives and interested citizens to network and exchange ideas on current environmental issues and future technologies.

DEQ Secretary Mike McDaniel, Carl Edlund, EPA Region 6 and Bill Stringer, EPA Washington, get ready to speak to the Plenary session of the Conference on the Environment.

DEQ Secretary Mike McDaniel said, "It is important to hear the good news about how Louisiana compares to other states in protecting the environment. It shows we are making progress in many areas, and while there is still much to do, we have a good foundation on which to build."

In April, DEQ celebrated Records and Information Management Month (RIMM) in a big way. To really get the ball rolling, Governor Kathleen Blanco issued a statewide proclamation recognizing the event. RIMM is celebrated internationally during April to promote the records management profession and to emphasize the impact that records and information management has on global business. It began in 1995 when the Association of Records Managers and Administrators Inc. (ARMA) established the event.

The theme was "Opening a Door to a World of Information." According to Wendy McLain, DEQ Records Manager, "We thought it was a great time to show off the many improvements to DEQ's records management program that have been implemented since the creation of the Records Management section in 2000. The goal of the month-long, comprehensive campaign was to promote the importance of good records and information management, as well as the value of openness in government and the public's right to know.

On April 2, the public had the opportunity to tour various DEQ departments inside the Galvez Building. The new facilities made it easier to conduct the tours and training. The tours highlighted the Public Records Center, Imaging Operations, Topic File Room, Library, Legal Library and Geographic Information System (GIS) Center. DEQ Secretary Mike McDaniel and Undersecretary Cy Buchert welcomed guests and provided opening remarks.

Training sessions covered topics such as how to handle request for public records and how to submit documents to be scanned in the electronic document management system. There were also exhibits on display in the Topic File Room and Public Records Center. Special contests events were scheduled during National Library Week.

"The response to this year's RIMM campaign has been very positive," said McLain. More than 150 DEQ employees and 50 individuals from organizations such as the Baton Rouge Advocate, Division of Administrative Law and Louisiana State University participated in the celebration. Ferol Foos, Recorder of Documents with the State Library of Louisiana, said, "I was impressed by each DEQ person's emphasis on service to the public/citizens. The attitude of openness, helpfulness, service was strong, sincere, and pervasive."

"This year was the most ambitious RIMM celebration DEQ has ever attempted," McLain said. "It will be a challenge to top this next year." Additional information about DEQ's Records Management program is found at [www.ldeq.org/pubrecords](http://www.ldeq.org/pubrecords).

Jay Stephenson, Environmental Chemical Specialist in Engineering Group 3 along with other DEQ employees, visit the Topic File Room. The Topic File Room was just one of the stops made on the tours offered during RIMM.

# Moving In the Right Direction

## Drinking Water Protection Program Moves onto Acadia Parish

From cochon d'lait in Avoyelles to frogs in Acadia, the Drinking Water Protection Team is moving in the right direction. Acadia Parish also home of the Frog Festival was recently selected as the next parish for DEQ's comprehensive Drinking Water Protection Program (DWPP) campaign. The DWPP is a voluntary program designed to assist communities in protecting their drinking water sources.

Clean water is a valuable resource and essential for good health. Approximately two-thirds of Louisiana's population depends on ground water for drinking water. Ground water is easier to contaminate than it is to cleanup. Knowing how to protect it from potential contamination is vital. The goals of the program are to inform the public of the steps each person can take to protect the integrity of their drinking water sources and increase public awareness and community involvement in the process. Another goal is to take this program into all Louisiana Parishes.

Acadia's Drinking Water Protection team consists of Mary Gentry and Tiffani Cravens both DEQ geologists. During the initial phase of the campaign, which began in early February and ended in late March, the team visited several public and private schools giving environmental presentations to more than 2,000 students. The team also met and shared information with 11 superintendents for municipal water systems in the parish.

The campaign officially kicked off in April with a community meeting held at the Rayne Civic Center. About 40 citizens comprised of elected officials, members of community groups, business and industry, came out to learn about the campaign's message *"Protect Your Drinking Water One Drop At A Time."* The team shared protection and conservation tips that residents could use in

their homes. The program also seeks volunteers to serve on committees to work with the community in creating a sustainable drinking water protection program. After the meeting, approximately 25 residents volunteered their time, service and resources.

The well-received Avoyelles Parish pilot program kicked off last year in May. The DDWP team members for the parish, Jesse Means and Michaela Marchand, are currently working with the Avoyelle's volunteer committee on passing drinking water ordinances. Marksville has a resolution on the table for an ordinance and three other towns, Mansura, Moreauville and Simmsport, are in the process of establishing ordinances as well. They have met with the planning commission for Avoyelles, which has passed the recommendation onto the police jury for discussion at their next meeting.

The DWPP is linked to the Louisiana Wellhead Protection Program, which DEQ has run for more than a decade. The Wellhead Protection Program has received numerous awards and certificates of recognition from the U.S. Environmental Protection Agency for excellence and efficiency.

The Wellhead Protection program is designed to protect the quality of public drinking water supplies obtained from community water wells. The

term "Wellhead" refers to the part of a water well that is present at the surface. A "Drinking Water Protection Area" is the surface and subsurface area surrounding a water well. Formerly, these

New signs like this one that read Drinking Water Protection Area can now be found throughout Acadia Parish.

areas were referred to as "Wellhead Protection Areas", but the term "Drinking Water Protection Area" better describes the protection of the resource itself.

Both teams have worked to replace signs along major roadways in Acadia and Avoyelles. Signs that read "Wellhead Protection Area" now reflect "Drinking Water Protection Area. The new signs help identify and clarify the program and remind people when a public drinking water supply well is nearby.

The next stop for the team is Denver, Colo., where they will represent DEQ in panel discussions at the EPA's 2004 Community Involvement Conference and Training.

The public may contact the team at (225) 219-3510 for an environmental demonstration. To learn more on how you can protect you drinking water visit the DEQ web page at <http://www.deq.state.la.us/evaluation/aeps/>.

Acadia Parish Drinking Water Protection Members Mary Gentry and Tiffani Cravens.

T-shirts, stress balls, pens, pencils and key rings are used as awareness tools to help the team get the message out about protecting drinking water.

Tiffani Cravens, Drinking Water Protection member, gives an environmental presentation to third and fourth grade students at St. Francis Elementary School in Iota.

# Specialized & Personalized

## DEQ's Library

Books are powerful tools to unlocking information. DEQ's specialized library has been helping many do just that. Once you unlock a book, you start a journey that can take you anywhere. Much like the journey of DEQ's library. The library started out with a few documents relating to air quality, accumulated by now DEQ Secretary Mike McDaniel and former employee Liz Santa, in the late 1980's. The information that could have easily fit into a small closet has now vastly expanded.

The location of the library within DEQ's former building offered inadequate housing space for the growing number of resources the library was amassing. DEQ's library is considered specialized because it houses a specialized collection the resources are very specific based on the subject areas. DEQ's library is focused on the science, engineering, technology and regulations.

Since moving to DEQ's new Galvez Building location, the library features a much larger first floor facility and new hours. Located in the southwest corner, the spacious library provides ample room for small informal group meetings as well as secluded areas for reading.

To showcase the new spaces and resources available, the library staff decided to take advantage of the Records and Information Management Month celebration and tie it into National Library Week.

First sponsored in 1958, National Library Week is a national observance sponsored by the American Library Association and libraries across the country each April. During the week of April 18-24 the library staff held an open house, gave a computer training tutorial, disseminated fact sheets, and put books and poster in the library's windows. To gauge their endeavors the library developed a quick and simple survey that is used to further improve the facility. They also conducted tours to DEQ employees and the public, which focused on promoting library use and support.

In an email to the agency one of the tour participants, Linda Broussard a Librarian with USGS National Wetlands Research, said, "As a member of the Special Libraries Association, I thoroughly enjoyed the 'behind the scenes' tour of the Public Records Center, Imaging Operations, Topic File

Patty Birkett, Library Manager, front far right, describes the services offered by the library to DEQ employees. Members of the public are welcome to search for DEQ resource materials during regular business hours.

Room, GIS Center, Legal Library, LDEQ Library, and the Records and Information Management offices. I work with researchers and the public on a daily basis who have a need to a wide variety of environmental information. This tour provided me with an update on the valuable information resources available through your Agency."

The library staff consists of Patty Birkett, DEQ Library Manager, Frank Truesdale, Librarian, Denise Roderick and Gaynell Holland, both library specialists. Patty has been with DEQ for three years, she said, "I choose to become a librarian because I wanted to contribute back to my 'community' what it had given to me." Serving the informational and educational needs of DEQ employees and the citizens of Louisiana with personalized service is a hallmark of the staff. Special librarians are considered information resource experts who collect, analyze, evaluate and disseminate information to facilitate accurate decision-making in corporate, academic and/or government settings.

"When individuals come in with specific

needs that we can meet it is very rewarding," Patty said. "I remember when I decided to become a librarian, I was very curious about 'things' that I knew very little about and enjoyed the 'hunt'." The library has more than 14,000 resources in technical fields that individuals can hunt through. Those resources are broken down into federal and Louisiana registers, journals, periodicals, magazines, books, newsletters, publications and federal registers on microfiche dating back to 1976.

For convenience, the library features various sections. The reference shelves offer a mixture of tools for research across many disciplines. The textbook section provides professional references in the fields of business, technology, science and engineering. The Louisiana collection contains numerous DEQ publications as well as documents from private and public entities. The journals, magazines and newsletters surround the library on new display shelving. Housed in the rear of the library are federal publications from branches, departments and agencies of the United States government, like the Environmental Protection Agency.

The library also offers training materials, audio-cassettes and videos. These items can be enjoyed in the media center that contains a television, VCR and DVD player. For employees that prefer to do their own searches, the library offers one online public access computer. All resources are cataloged in a searchable database that employees can access from the personal computers through DEQ's intranet. Currently resources are circulated only to DEQ employees. The public is encouraged and welcome to use the library and the professional expertise of its staff as much as possible.

Just remember, if you want to take a journey, the library is open Monday through Friday from 7 a.m.-5 p.m. to assist you.

Linda Lightfoot, Baton Rouge Advocate Executive Editor and President of Louisiana Coalition for Open Government, Janelle Barnes, Louisiana Department of Transportation and Development, and Secretary Mike McDaniel during a tour of the DEQ library. More than 50 individuals for local organizations participated in the tours held in celebration of RIMM.

## Keep America Beautiful “Waste in Place” Teacher Workshops

**M**unicipalities and parishes throughout the state have been sponsoring Keep America Beautiful “Waste In Place” teacher workshops, through funding from DEQ’s Litter Abatement Grant Program.

The Keep America Beautiful “Waste In Place” curriculum guide, written by teachers for teachers, is presented at these workshops. Each participating teacher receives a guide which teaches an integrated approach to the management of municipal solid waste. The workshop offers an activity-based program composed of detailed and comprehensive lessons on litter prevention, waste reduction, recycling, composting, waste-to-energy and landfills. DEQ’s goal is to provide this valuable resource to teachers so that they can help their students become more aware of the sources of municipal waste, the characteristics of this waste and the various options for handling it.

After completing the “Waste In Place” workshop, teachers use this information in their classroom. With the help of teachers that are trained in the “Waste In Place” program, DEQ is able to reach thousands of students across the state each year. For more information go to [www.deq.state.la.us/assistance/litter/waste\\_in\\_place\\_workshops.htm](http://www.deq.state.la.us/assistance/litter/waste_in_place_workshops.htm).

Teachers teaching teachers about recycling and reuse is the basis for the Waste in Place program.

## DEQ Promotes Ozone Awareness at the second annual City-Wide Youth Power Expo

Youth from throughout EBR Parish schools attended the second annual “Youth Power” Expo at the Baton Rouge River Center. They were given posters and information about ozone and how each person can help prevent its formation. Admon McCastle, Community and Industrial Relations Section, represented DEQ at the event and gave out the information.

## Students at Oak Grove Primary in Prairieville Take Kid’s Pledge

**L**ots of eager fourth graders’ hands reached into the air when Judy Deselle, Litter Reduction and Public Action, asked them “How long does it take a diaper to biodegrade and how much does it cost Louisiana to pick up litter every year?” After much guessing about the diaper, 450 years was the answer. It costs Louisiana over \$10 million each year for litter.

Judy Deselle, DEQ Litter Reduction and Public Action, shows a litter video to fourth grade students at Oak Grove Primary School in Prairieville.

Judy and Teresa Edwards, Recycling, gave a presentation about litter to Charlotte Baker’s three fourth grade classes at Oak Grove Primary School in Prairieville. The children watched a 10-minute video on what do with litter, had a question and answer session, and were asked to sign a kid’s pledge to pick up litter.

Packets of information including coloring books, crayons and bright yellow ruler with the 1-800-litbug litter number on the back, were handed out to each child. Judy explained that if you spot someone littering from a car, you can call the litter hotline and report their license plate number. DEQ sends them a letter warning them about the consequences of littering – fines, public service and even jail time.

Judy also told the classes about two DEQ sponsored clean ups during the year, The Great American Clean up, March 1 to May 31, and Beach Sweep in September.

The students were stumped when Judy asked them, “What is the number one piece of litter that is thrown out?” With a little help from Teresa, the kids came up with the answer, cigarettes.”

This program, going into the schools and giving litter presentations, is part of DEQ’s continuing commitment to education and outreach. For more information go to [www.deq.state.la.us/litter/geninfo.htm](http://www.deq.state.la.us/litter/geninfo.htm).

Judy Deselle, Litter Reduction and Public Action, Teresa Edwards, Recycling and Charlotte Baker, fourth grade teacher, discuss the many programs available to the schools through DEQ.

# Southwest Regional Touts Customer Service

The staff at the Southwest Regional Office knows the importance of customer service. Like red beans and rice on Mondays, customer satisfaction is a tradition that has been passed down to each new employee who comes to the Lake Charles office.

Regional Manager David Daigle said communication with concerned citizens, environmental groups, industry and the regulated community has helped employees form working relationships throughout the region. Daigle is also proud of the effort his team puts into its ambient air and water monitoring programs. But, it's the customer service that makes him smile the most.

"I've been with DEQ for 15 years," Daigle said. "When I started here all the supervisors and employees in SWRO were already customer oriented. That mindset was passed down to me and everyone else who worked here. We still believe in handling complaints from citizens the right way and we all strive to make sure our customer is happy."

Billy Eakin is an Environmental Staff Supervisor at the regional office. He said the office conducts approximately 600 inspections, handles about 300 complaints and averages 800 incidents per year. And anyone who calls the Southwest Regional Office will receive a prompt return call.

"We write it into employees' planning review," Eakin said. "They're supposed to return calls the same day, if possible. Everyone tries to do that."

Another interesting theme to the office's relationships with industry and environmental groups is McNeese State University. The college is a common thread among those who work with and tend to environmental issues in southwest Louisiana.

"McNeese was one of the first universities in the nation that offered a degree in environmental science," Daigle said. "It started up in the 60s and in the 70s a lot of us graduated, moved away to find jobs and are now back home working in southwest Louisiana in some capacity of environmental science."

Scott Wilkinson, an Environmental Staff Supervisor at the regional office, said that having so much in common with the residents makes it seem as if they are working in a neighborhood. People know each other's names, their roles and what they do.

"The people in our region are like our neighbors," said Wilkinson, who has a bachelor's in

wildlife biology from McNeese and has worked at DEQ for 15 years. "We went to school with many of them and a lot of good working relationships were started before we even started working at DEQ. We've gained a lot of information from guys who work in industry or in the community because we know them. We've had to tell people things they didn't want to hear, but because they know us they understand. This region has a unique culture and you have to know the people."

The landscape in the southwest region of Allen, Beauregard, Calcasieu, Cameron, Jefferson Davis and Vernon parishes is also unique and diverse. There are coastal marshlands, historic prairie lands, pinelands to the north and hardwood bottoms along the streams. The cultures of people living on these landscapes are as diverse as the habitat itself. Daigle said that makes the job interesting and often fun.

Daigle also said the industries his region regulates are also very diverse. In addition to major petroleum refineries and the petrochemical industry, the regional office regulates paper mills, saw mills, oil and gas production facilities, seafood processing facilities, the pipeline industry and others. Because the area is rich in agriculture operations in rice, sugarcane, cattle and timber production, they also partner with Louisiana Department of Agriculture and Forestry inspectors on environmental issues. "It's a heck of a diverse deal," Daigle said.

Daigle is also impressed with his staff's attention to accurate monitoring. He said that a few years ago the Calcasieu area was experiencing elevated ozone levels. Now the area is under a maintenance plan and in attainment.

"The team that maintains and operates our air-monitoring sites have a lot of energy," said Daigle, adding that there are seven sites in the region. "Our site operators know that if the data is not good, then we can't make good decisions. We have also partnered with the Lake Charles Industry Alliance on air monitoring sites in an

The staff of the Southwest Regional office in Lake Charles.

Scott Wilkinson, Environmental Staff Supervisor, David Daigle, Regional Manager, and Billy Eakin, Environmental Staff Supervisor, strive to give the citizens good customer service.

effort to collect even more data, and our people know the importance and implications of that work."

Daigle has the same positive message about the ambient water-sampling program in his region as well. One other item that pleases Daigle about the regional office is the staff, he said.

"We have a neat blend of experienced veterans and the young, energetic inspectors, and we call on all their strengths every day to do our job," Daigle said. "Most of our employees tend to stay here because people feel at home here. This is a good place to live, work and raise kids"

## Earth Day Celebrates the Environment

It was a perfect day. It was sunny and clear but the wind kept things cool at this year's Earth Day celebration. DEQ puppeteers and volunteers provided education and entertainment to the crowd that strolled North Boulevard. The performance tent of DEQ's Puppet pals provided seating for the many children who stopped to watch and learn about recycling, litter and other topics.

Holly Smith, DEQ Office of Environmental Compliance, gives voice to Ditty Bags, senior puppet, a.k.a. the puppet with the mouth.

Alternative fuel vehicles like this G.E.M. battery-power vehicle, were an important part of Earth Day's all species parade.

# “Stepping Out to Save Lives”

Your heart tells you when you're in love, hurt or afraid. But it may not tell you when you have heart disease. DEQ recently wrapped up an aggressive fund-raising and educational awareness campaign to help aid the American Heart Association in its fight against heart disease, stroke and other cardiovascular disease. By stepping out to save lives, the agency raised more than \$6,000 surpassing its original \$5,000 goal. DEQ led the State of Louisiana, who ranked fourth out of 98 companies in the Baton Rouge capitol area with close to \$23,000 in money collected. Twenty-two individuals rose to the challenge to become team leaders, volunteers and walkers.

Awareness is the first step. The American Heart Association is the oldest and largest national non-profit voluntary health organization in the world dedicated to reducing death and disability from cardiovascular diseases and stroke. Since 1924, the American Heart Association has funded more than \$1.9 billion of cardiovascular and stroke research in the United States. Funded research has yielded such discoveries as CPR, coronary bypass surgery, pacemakers, artificial heart valves, the heart-lung machine, life-extending drugs and techniques to repair heart defects.

The agency kicked off the campaign with Go Red for Women! Go Red for Women is the American Heart Association's national call for women to take charge of their health and live stronger, healthier lives. Heart disease and stroke are the No. 1 and No. 3 killers of women in America. Unfortunately, only 8 percent of women think heart disease is a major concern. Female employees were given information to help them recognize and reduce their risk for heart disease. All employees were asked to wear red clothing along with red stickers in the shape of a dress, which is the logo for Go Red for Women.

Beginning with the kickoff and ending on the

day of the walk, helpful and interesting daily facts were posted on DEQ's intranet website. Through this medium, employees could increase their understanding and learn additional information about the warning signs of a heart attack and stroke.

Team Leaders and volunteers put on several exciting events that included a heart sale, several bake sales, a hot breakfast sale, a Mardi Gras Mambo Madness bead contest, My Heart Screams for Ice Cream sale and a Heart of the Bayou Jambalaya luncheon sale. “The atmosphere was truly exciting for all the activities. The generosity and spirits of the employees was amazing,” said Tiffany Dickerson, this year's company leader for the campaign. “But the best part is that it didn't end there, several employees signed up for the 5K walk.”

On Saturday, March 20, DEQ employees and their families joined forces with others in the community to participate in the Heart and Sole Walk. The festivities began at 9:30 a.m. on the campus of Louisiana State University - Old Front Nine, located on CEBA Lane off Nicholson Drive. Several team leaders and walkers received sponsorship from individuals that donated money for their participation in the walk and earned terrific prizes – ranging from a Caribbean cruise for two to a Proctor Silex juicer.

An awards party held in April culminated the campaign. Several team leaders enjoyed food and fun courtesy of the American Heart Association at Superior Grill. The top five teams and walkers were recognized during the ceremony. Tiffany Dickerson accepted the award on behalf of the state of Louisiana and DEQ.

Women – and men – develop unique life-changing power when they take steps to reduce their risk. That's because much of heart disease can be prevented. Thanks to everyone for their help, sup-

Robert Williamson, Chad Keith, Jimbo Earles, Chef Chris Mayeux and Robert Nissen work to prepare the best jambalaya on the planet for the Heart of the Bayou jambalaya sale.

Clockwise-DEQ employees, Roselle Foote, Tom Harris, Claudia Richard, Sharon Parker and Perry Theriot enjoy the Hot Breakfast sale.

port, and willingness to learn more on how to protect your heart and the hearts of loved ones. There's a lot we all can do to care for ourselves. To learn more, about heart disease and stroke visit [www.americanheart.org](http://www.americanheart.org). 

Kneeling-Company Leader, Tiffany Dickerson 1st row-team leaders, Lauren Ardoin, Grace Battley, Erin Dartez, Melanie, Elizabeth Milligan, 2nd row-Admon McCastle, Heather Evans, Regina Philson, Loretta Deggins, 3rd row-Kristy Royal, Keiley Williams Holly Smith, Andrea Jones, Maureen Kennedy, Lemanuel Turnipseed, Chris Mayeux, 4th row-Stephanie Braden, Calvin Fair, and Chad Keith. # DEQ On The Move

## Brownfields Cleanup Revolving Loan Check Signing Ceremony

Linda Garczynski, EPA Headquarters Director for Brownfields Cleanup and Redevelopment; Hall Bohlinger, former DEQ Secretary; Sam Coleman, EPA Region 6 Superfund Director; Dr. James Brent DEQ Assistant Secretary Office of Environmental Assessment; Honorable Mayor C. Ray Nagin and Tiffany Dickerson, DEQ Public Information Officer were on hand at the check presentation for the Brownfields Cleanup Revolving Loan ceremony. The \$325,000 will be used to help clean up a property at 3317-3328 Chartres Street. "This cleanup will serve as a catalyst for future redevelopments across the City," Mayor Nagin said.

**2nd annual Louisiana Brownfields Pilots Workshop**  
DEQ Public Information Officer, Tiffany Dickerson; Alison Gibbs, City of Baton Rouge Planning Commission Coordinator and Deon Roberts, New Orleans City Business reporter recently participated in a panel discussion on "How to Promote Positive Public Relations for your Brownfields Program," at the 2nd annual Louisiana Brownfields Pilots Workshop. The workshop provided information to assist governmental and nonprofit agencies participating in DEQ's and EPA's Brownfields initiative. It featured interactive discussions, educational presentations and networking opportunities.

## Ready for Reuse Ceremony

ExxonMobil Refining and Supply division was recognized at the 16th annual UST/LUST Conference in New Orleans. ExxonMobil had five underground storage tank sites that have been determined to be "Ready for Reuse." DEQ Secretary Mike McDaniel presents a certificate of recognition to DEQ Team Leader and geologist Ann Munson for her work at one of the sites as EPA Region 6 Multimedia/Planning Director Carl Edlund looks on.

## Greater Baton Rouge HHMD 2004

April 24 proved to be another great day for collecting household hazardous materials from homeowners. More than 800 vehicles carrying paint, pesticides, fluorescent bulbs and tires were processed at Memorial Stadium during the four-hour event. Volunteers from Dow, DEQ, Baton Rouge city-parish government, ExxonMobil, LSU, Lamp Recyclers of LA and the Corporate Recycling Council collected and sorted the material. Recyclable items, such as mercury, lead acid batteries, antifreeze, used motor oil and computers were recycled. Waste tires were sent for processing. Items like pesticides, herbicides, pool chemicals, and unusable paints and thinners were packaged for incineration. Under the paint tent, DEQ volunteers checked, mixed and blended usable latex paint into 137 five-gallon buckets. All 137 buckets were 'adopted' for use by non-profit organizations and families in need.
